Extensions to type **Article**

It is recommended to use well established vocabularies like IPTC, EBU, schema but

to use html as content mediaType
and the best HTML5 semantic practices
alongside meta properties with
• rNews or
• rdfa / rdfa Lite

redaktor has an extensive context for Article
and is extending it with e.g. wikidata & OSM.

This is self declaring and has benefits:
- Common Knowledge (facts)
- multilanguage labels
- multilanguage descriptions / "summary"
- multilanguage full text / "content"

Note:

We should define a Best Practices Document.
